PROJECTS

BeerLeagueMe - nathanejbrown.github.io/beerleagueme

This is an ongoing project to create a network of local sports events. The front end is built in AngularJS, and accesses a separately deployed Node.js server with a PostgreSQL database.

Listen - nathanejbrown.github.io/capstone-front-end/#/

Listen was my Capstone project at Galvanize. It's intent is to connect survivors of sexual assault with counselors. It's primarily written in AngularJS with an Express, Node.js, and PostgreSQL back end.

Tribbianify - nathanejbrown.github.io/q1Project

This was a project I did for fun that's based on an episode of Friends where Joey uses a thesaurus on every word in a letter he's writing to make it sound more intelligent. It heavily utilizes AJAX technology and was built with HTML, CSS, JavaScript, and jQuery.

EXPERIENCE

Lifesparq, Boulder — Software Developer

July 2017 - November 2017

- Primary developer for phase one of company's software.
- Worked to coordinate the rest of the development team.

Self-Employed, Broomfield — Writer
